

RELATIONAL SCHEMA

(see notes in second page)

IMPORTANT NOTES (This schema is not entirely up to date):

1. There are THREE important columns missing:

- "Photo_Type" column in UTENTE: this column is necessary to track the MIME type of a profile photo.
- "MIME_Type" column in SUONO: exactly the same but for sounds.
- "Id_Optione" column in OPZIONI_RISP_MULTIPLA: Initially the PK of this table was composed by Id_Carta and Testo_Optione. This column is meant to replace Testo_Optione and this last one has been "downgraded" to a not-null column rather than a PK attribute. This makes things much easier for options management.

2. Primary Keys are not so visible because of a software kind of bug. To make things clear all PKs are composed by just one column and that column is the first one in the schema representation in every table. Except the OPZIONI_RISP_MULTIPLA that has the subsequently added "Id_Optione" column to its PK (already formed by "Id_Carta") making ("Id_Carta", "Id_Optione") the new PK.
